

Firewall

Protect Your Data and Systems With the Latest Perimeter Defenses

Any vulnerability in your network can be exploited with devastating results. The always active and ready capabilities of a firewall are the ideal way to repel sophisticated cyberattacks before they enter your perimeter.

Next generation infrastructure protection for your entire network

Cyberattacks are a constant threat, and much closer than many businesses realize. A successful breach can have devastating consequences – lost revenue, reputational damage, reduced customer confidence and loyalty, and possibly legal repercussions.

IT departments are stretched thin, and routine network management tasks can leave little time for the complexities involved with maintaining a threat-ready security posture.

Segra Firewall is offered in on-premises and hosted configurations, ensuring you have the right level of network defenses according to your needs and capabilities without exhausting precious IT resources. Configured, activated and managed around the clock by our experts, you can conduct business as usual with confidence knowing hostile traffic is intercepted in real time before it can penetrate your IT infrastructure edge.

A better level of defense at your network perimeter

- Flexible on-prem and hosted configurations ensure the right fit for your organization's operations and abilities.
- Unified Threat Management architecture keeps your business-critical data secure and delivers peace of mind.
- As your operations grow and your network security needs change, the system scales and adapts in response.
- Active anti-virus and anti-malware systems use the latest threat intelligence to identify potentially malicious traffic automatically.
- Coordinated security alerting, reporting, compliance and response measures lighten the workload for your IT staff.
- Multiple tiers of protection provide customizable security policies tailored to your specific needs.

Why Segra?

At Segra, we understand that winning in today's business landscape requires more than just technology — it requires a strategic connectivity game plan, relentless agility and innovation, and a human touch.

We invest in our customers, our network and our people to deliver exceptional connectivity solutions and customer service that empower businesses to thrive.

Our local-market operating model means your whole team – from sales to network engineering to customer support – are all living and working in the communities they serve.
