

Data Center and Colocation

Increase performance and safety, not costs and challenges.

IT infrastructure should work for you, not fight against you. Running critical systems off-site lets you focus on innovating and executing to build a competitive edge.

Enterprise-grade power without compromise

As digital transformation continues to advance, so does the urgency for secure compute and storage facilities. That means costs and challenges have increased exponentially, too.

Segra Data Centers and Colocation are a digital stronghold for mission-critical data and applications. As your business needs change, our highly resilient facilities scale with you. And our robust physical and digital security ensure essential information never falls into the wrong hands. The limits found within the four walls of your server room are replaced with an environment that's perfectly suited for the demands of your operations.

More Than Just Space and Power ...

- 24/7 monitoring and management by Segra Network Operations Center maintains smooth, consistent performance at all times.
- Multiple tiers of physical and network security ensure that only people with the right clearance can access mission-critical systems.
- Highly redundant and diverse power — including UPS, generator backup and dual-powered A&B supplies — keep critical systems running without interruption.
- Secure, accessible data storage and retrieval environments support peak cloud performance.
- Options for caged, uncaged and private cabinet configurations provide superior control and performance for core business operations.

Why Segra?

At Segra, we understand that winning in today's business landscape requires more than just technology — it requires a strategic connectivity game plan, relentless agility and innovation, and a human touch.

We invest in our customers, our network and our people to deliver exceptional connectivity solutions and customer service that empower businesses to thrive.

Our local-market operating model means your whole team — from sales to network engineering to customer support — are all living and working in the communities they serve.

Specifications

Tier-3 and Tier-4 data centers, space, power and environmental management

SSAE 16, HIPAA and PCI DSS compliant

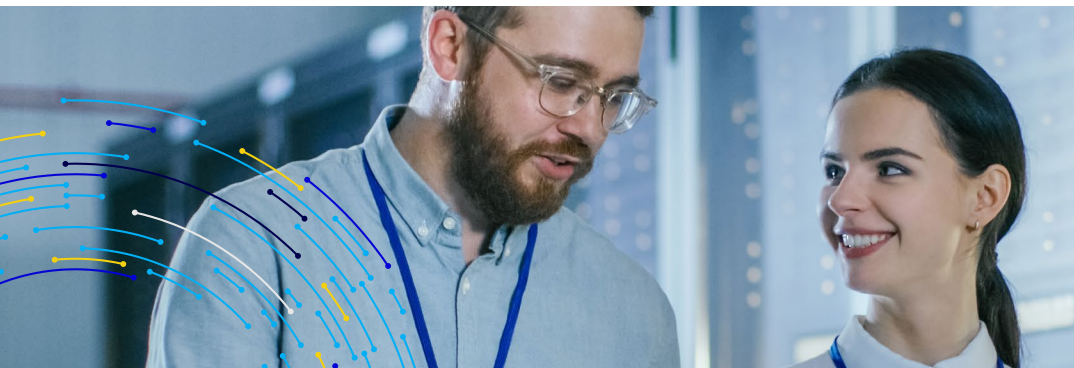

SOC 1 and SOC 2 certified

Multiple network layers and power diversity

Direct connection to the Segra fiber network

Let's create winning connections together.
