

Backup as a Service

Segra Backup as a Service (BaaS) is a differentiated private cloud solution, hosted in our enterprise-grade data centers and supported by dedicated solution architects and support teams. Combined with Segra's expansive fiber network, BaaS delivers end-to-end security and reliability for your most valuable data.

Data is one of your organization's most critical assets, and it requires protection against system failures, human error, and external threats such as ransomware. That responsibility grows harder as data volumes increase and environments become more distributed. Segra BaaS is part of our managed services platform and protects both physical and virtual servers. Flexible protection plans let you align retention and recovery policies with the business value of each data set, while built-in data retention, protection, monitoring, reporting, and centralized management simplify daily operations.

Customer Benefits

Enterprise Class Data Protection

A fully integrated suite of data management and protection capabilities aligned with your business strategy, security posture, and compliance obligations.

Only Pay for What You Use

Consumption-based pricing, such as per GB or per endpoint device, keeps costs aligned with actual usage.

Proactive Capacity Planning

Segra manages capacity on your behalf with a reliable platform that scales as your data grows.

Platform Availability

A highly available, redundant configuration delivers 99.99% backup availability to support business continuity.

Client-Side De-Duplication

Only unique data is transferred and stored, producing faster backups and lower storage costs.

Compression

Data is stored in a compressed format, reducing storage consumption and total cost.

Encryption on the Wire and at Rest

Advanced authentication and encryption protocols are fully integrated to secure your data at every stage.

Windows and Linux Support

Protect your full application stack regardless of your operating system.

Comprehensive File Backup

Protect entire file systems and every file type from a single platform.

Data Security and Privacy

By default, administrators cannot view customer data in any form.

Let's create winning
connections together.
