

Disaster Recovery as a Service

Protecting business data within a well-designed business continuity plan has never been more complex or more important. Government, financial services, and healthcare organizations face specific continuity requirements, including Continuity of Government (COG), the Resiliency Maturity Model, and the HIPAA Security Rule. To meet these demands, Segra partnered with best-of-breed technology providers to deliver a robust Disaster Recovery as a Service (DRaaS) solution.

An extension of Segra's managed services platform, DRaaS addresses the operational risk created by both unplanned and planned disruptions. It is a differentiated private cloud solution, hosted in our enterprise-grade data centers and backed by a dedicated support team. Continuous replication at the virtualization (hypervisor) layer delivers high-performance disaster recovery with end-to-end security and reliability. DRaaS is storage agnostic, supports mixed hypervisors, and replicates any data center or site, including private cloud, service provider, and branch office environments.

Unplanned Disruptions

Human Error and Accidental Deletion

Hardware and Infrastructure Failures

Cyberattacks and Ransomware

Natural Disasters and Power Outages

Planned Disruptions

Mergers and Acquisitions

Cloud Migrations

Data Center Consolidation

Maintenance and Upgrades

Features

- Segra's expansive fiber network for fast, secure replication • between sites
- Competitive, predictable pricing
- Turnkey deployment with ongoing management by Segra
- Enterprise-grade data centers supported by a dedicated support team
- Experienced data center teams skilled at resolving business continuity challenges and maintaining regulatory compliance
- Aggressive standard service levels, with recovery point objectives (RPO) measured in seconds and recovery time objectives (RTO) measured in minutes
- Simplified management interface for failover in just a few clicks
- 99.99% solution availability
- High-performance flash storage

Let's create winning
connections together.
