SEGRA

# Business Wi-Fi

**Managed, secure, Wi-Fi 7 capable wireless networking built on Segra connectivity.**

Reliable, secure, and high-performance wireless connectivity is essential to today's business operations. From providing guest Wi-Fi access and secure employee connectivity to supporting bandwidth-intensive applications and growing device demands, designing and managing a business-class wireless network requires expertise and continuous oversight.

Business Wi-Fi is a fully managed wireless solution that combines Wi-Fi 7 technology, expert design, and management to deliver a secure, reliable, and scalable network. Segra provides end-to-end wireless services that handles deployment, maintenance, and support, so your business can stay focused on what matters most.

| Customer Benefits | Features |
|---|---|
| Offload the complexity of designing, deploying, and managing your wireless network with a comprehensive, fully managed solution. | Detailed Wi-Fi assessment to identify application, device, bandwidth, security, and coverage requirements. |
| Gain access to enterprise-class Wi-Fi expertise while reducing demands on internal IT resources and eliminating the need for specialized in-house staff. | Site evaluation to understand existing infrastructure, RF considerations, floor plans, and mounting requirements. |
| Certified engineers and technicians work with each customer to design and deploy a Wi-Fi solution that aligns with business requirements, building layout, user density, application needs, and security objectives. | Wireless capacity planning to determine optimal access point placement and network performance requirements. |
| Offers a single provider for both WAN connectivity and managed wireless networking. | Predictive wireless design and heat mapping to model signal coverage and user density. |
| Scales to accommodate additional users, locations, devices, and bandwidth requirements. | Professional installation, configuration, testing, and validation of Wi-Fi equipment. |
| Supports modern applications and connected devices with Wi-Fi 7 capable technology. | Post-deployment verification to ensure performance aligns with design objectives along with ongoing management, maintenance, troubleshooting, and support. |
| Enhances user experience with improved performance, coverage, capacity, and reliability. | Cloud-managed wireless infrastructure with centralized visibility. |
| Segra Business Wi-Fi is monitored and managed 24x7 by Segra support, providing visibility, performance monitoring, and rapid response to service-impacting events. | Guest Wi-Fi, employee Wi-Fi, and segmented network options available. |

## Specifications

- Available throughout the Segra service footprint.
- Segra WAN service required, including Dedicated Internet Access (DIA) or MPLS (select markets).
- Indoor and outdoor Wi-Fi solutions available.
- Supports modern wireless security standards, including WPA3.

Let's create winning connections together.
